Gulf Navigation Holding

- The stock traded with a bullish showing in the previous session and ended at AED1.41, after hitting a high at AED1.45.
- A possible signal line crossover from below by the daily MACD coupled with the RSI and stochastic oscillators trading with positive showing hints at a strong technical outlook.
- The key technical obstacle is situated at the 20day SMA (currently trading at AED1.42), followed by the AED1.45 and 50SMA (currently placed at AED1.46). A break above the latter might lead to further bullishness in the stock.
- However, the weekly MACD and stochastic indicators are trading with a bearish tone, suggesting that the upside might remain limited. Key support is placed at the AED1.39 level, followed by the 200day SMA (currently trading at AED1.37) and AED1.35 levels. A breach below the latter might reverse the trend to bearish.

Aldar Properties

- Following the formation of a bullish harami candlestick pattern on the daily chart on Sunday, the stock extended its gains yesterday and finished at AED2.23, after notching a high at AED2.25.
- On the weekly chart, the momentum oscillators are trading with an upside tone, reflecting at bullish momentum in the coming week. As clearly visible on the daily chart, the momentum oscillators are moving north, further confirming the above view.
- Immediate resistance is aligned at the AED2.25 level, followed by the AED2.28 and the 50day SMA (currently trading at AED2.30) levels. A clear break and stability above the latter might lead to further strength in the stock.
- On the downside, intraday support resides at the 20day SMA (currently trading at AED2.20), followed by AED2.17 and AED2.14 levels. A breach below the latter might trigger bearishness in the stock.

Dubai Islamic Insurance and Reinsurance Co

- Yesterday, the stock traded with a bullish tone for the second consecutive session and settled at AED0.790.
- Although the weekly RSI is pointing north, the MACD and stochastic are trading with a weak bias, indicating at a negative technical outlook. However, a potential signal line crossover from below by the daily MACD along with the RSI and stochastic oscillators moving upwards hints the presence of bullish momentum in the near term.
- The psychological AED0.800 level is acting as a key intraday resistance, followed by AED0.809 and the 20day SMA (currently placed at AED0.820). A break above the latter might trigger further bullishness in the stock.
- On the other hand, key technical support is located at the AED0.770 level, followed by the AED0.760 and crucial AED0.750 levels. A breach below the latter might lead to negativity in the stock.

Arabtec Holding

- After forming a bearish engulfing candlestick pattern on the daily chart on Sunday, the stock declined for the third straight session yesterday and finished at AED0.837.
- Currently, the weekly momentum oscillators are trading at a lower level below their midlines, hinting at a weak technical picture. Moreover, a signal line crossover from above by the daily MACD accompanied by the RSI and stochastic heading south, further affirms the bearish view.
- Important support is situated at the AED0.825 level, followed by the daily lower Bollinger band AED0.810 and the psychological AED0.800 levels. A move back below the latter might trigger further weakness in the stock.
- Conversely, intraday resistance is placed at the AED0.850 level, followed by the AED0.872 and the 20day SMA (currently placed at AED0.890) levels. A surge above the latter might turn the main trend to bullish.

Ajman Bank

- After forming a matching low candlestick pattern on the daily chart on Monday, the stock posted mild gains in the last session and settled at AED1.20, following a high at AED1.22.
- As of now, the daily momentum oscillators are trading with a slightly positive tone, reflecting at a bullish technical scenario. On the weekly chart, the RSI and stochastic oscillators are attempting to move out of their oversold region, further supporting the above stance.
- Important resistance is located at the AED1.22 level, followed by the 20day SMA (currently trading at AED1.25) and AED1.27 levels. A sustained break above the latter might lead to further positive momentum in the stock.
- On the contrary, crucial support is seen at the 1.18 level, followed by the daily lower Bollinger band (currently trading at AED1.17) and AED1.15 levels.

Ektitab Holding Company

- The stock formed a long bearish candlestick pattern on the daily chart yesterday and closed at AED0.481.
- On the daily chart, the MACD is tranquil in its negative territory coupled with the RSI and stochastic showing loss of upward potential hints at bearishness in the coming session. Additionally, a potential negative centreline crossover by the weekly MACD along with the RSI and stochastic oscillators trading with a bearish tone further endorses the above stance.
- Key support is positioned at the AED0.475 level, followed by AED0.467 and the daily lower Bollinger band (currently placed at AED0.460). A breach below the latter might lead to further acceleration to the downside.
- On the positive side, key resistance is placed at the 20day SMA (currently trading at AED0.490), followed by the psychological AED0.500 and 50day SMA (currently placed at AED0.510).
