Al Salam Group Holding

- Yesterday, the stock formed a long bullish candlestick pattern on the daily chart and ended at AED0.797, after making a high at AED0.815.
- On the daily chart, the momentum oscillators are sharply heading upwards, hinting at bullish momentum in the coming session. On the weekly chart as well, the MACD and RSI indicators are trading with a bullish showing, further validating the above stance.
- Key resistance is located at the AED0.815 level, followed by the daily upper Bollinger band (currently placed at AED0.830) and AED0.841 levels. A sustained break above the latter might lead to further acceleration to the upside.
- On the downside, key support is placed at the AED0.790 level, followed by the 20day SMA (currently placed at AED0.780) and AED0.770 levels. A breach below the latter might trigger negativity in the stock.

Union Properties

- After forming a shooting star candlestick pattern on the daily chart on Monday, the stock declined for the third consecutive session yesterday and settled at AED0.948, following a low at AED0.947.
- At present, the weekly momentum oscillators are tranquil above their centrelines, reflecting at a positive technical picture. However, the daily RSI and stochastic oscillators are showing loss of upward potential, suggesting at possible correction in the near term.
- Important support is located at the 100day SMA (currently placed at AED0.940), a breach below which might lead to further negative momentum in the stock, paving way for the 20day SMA (currently trading at AED0.930) and AED0.921 levels as the next possible supports.
- Conversely, crucial resistance is placed at the AED0.955 level, followed by the AED0.970 and the daily upper Bollinger band (currently trading at AED0.980) levels.

Eshraq Properties Co

- The stock traded lower for the second successive session yesterday and closed below the daily lower Bollinger band at AED1.03.
- A potential negative centreline crossover by the weekly MACD along with the RSI and stochastic heading lower, hints at bearishness in the coming week. Moreover, a daily MACD is attempting a signal line crossover from above accompanied by the RSI and stochastic trading with a weak bias, further confirms the above view.
- Immediate support resides at the AED1.02 level, followed by the AED1.01 and the psychological AED1.00 levels. A breach below the latter might lead to further weakness in the stock.
- On the flipside, crucial resistance is placed at the AED1.04 level, followed by the AED1.05 and the 20day SMA (currently trading at AED1.06) levels. A break above the latter might trigger positivity in the stock.

Dar Al Takaful

- After forming a bearish harami candlestick pattern on the daily chart on 15 June, the stock weakened for the fifth straight session yesterday and finished at AED1.06.
- A signal line crossover from above by the daily MACD along with the stochastic indicator placed in its oversold region, reflects a negative technical scenario. Similarly, a possible negative centreline crossover by the weekly MACD along with the RSI and stochastic moving south, further affirms the bearish view.
- Key support is positioned at the AED1.05 level, followed by the AED1.04 and AED1.03 levels. A breach below the latter might lead to further acceleration to the downside.
- Meanwhile, key intraday resistance is placed at the AED1.07 level, followed by the AED1.08 and the 20day SMA (currently placed at AED1.09). A surge above the latter might reverse the trend to bullish.

Gulf Navigation Holding

- The stock traded in the red in the previous session and ended at AED1.44, after touching a low at AED1.43.
- With a likely centreline crossover by the daily MACD to trade into the negative region and the RSI & stochastic oscillators pointing south, the near-term technical outlook appears to be bearish. Moreover, the weekly RSI and stochastic oscillators are trading with a bearish bias, further endorsing the above view.
- Key support to be watched is situated at the 200day SMA (currently trading at AED1.43), followed by the AED1.42 and the daily lower Bollinger band (currently placed at AED1.41) levels. A move back below the latter might lead to further downside momentum in the stock.
- On the bright side, the key technical barrier is placed at the AED1.45 level, followed by the AED1.46 and AED1.47 levels.

Abu Dhabi Islamic Bank

- Yesterday, the stock traded with a bearish tone for the second continuous session and closed at AED3.56.
- As clearly seen on the weekly chart, the momentum oscillators are trading at a lower level below their midlines, hinting the presence of negativity in the coming week. In addition, the daily momentum oscillators are trading with a bearish showing, further supporting the above view.
- Key technical support resides at the AED3.55 level, followed by the daily lower Bollinger band (currently trading at AED3.54) and AED3.53 levels. A breach below the latter might lead to further bearish pressure on the stock.
- On the other hand, key resistance is placed at the AED3.57 level, followed by the AED3.58 and the 20day SMA (currently trading at AED3.60) levels. A break above the latter might trigger positive momentum in the stock.
